PROJECTS

- **Filipino Alamat**:

  This is an android application repository for Filipino Alamat stories. With this app, it helps students when they have school projects about folklore. The app is also open to those who wanted to make and submit their own stories. I successfully launch this app in the google play store and in about 3 months I scale the app to 50,000 downloads and continues to grow on its own. Now I am earning through this small app and It helps me to support my web hosting expenses.
  Role: Application Developer
  URL: https://play.google.com/store/apps/details?id=filipino.alamat
  Period: 2 Weeks

- **POSlite**:

  This is a web-based application that I developed using CodeIgniter. This is my first project in my journey in learning web development. I launched this app commercially and attracted local businesses. Now this app is used by several local businesses such as motor parts, buko house and retails stores. This App is a clean and robust software that provide everything to run a small to medium scale business efficiently.
  Role: Application Developer
  URL: https://poslite.herokuapp.com
  Period: 1 Month

- **AHRIS**:

  This is a web-based application developed using Laravel and R programming. This software accepts output from biometric system to automate the calculation of attendance and provide detailed reports of employees' total hours, absences and

tardiness. The system includes leave manage module that allowed employee to have access to their leave information and apply for leave online. The system utilized data mining technology to predict employees' tardiness base on the Naive Bayes algorithm. With this app, Managers and HR professional could forecast their employee's punctuality and reduce the work needed for attendance and leave management.
Role: Application Developer and Researcher
Period: 3 Months
URL: https://hrisa.herokuapp.com/ URL: https://alger.shinyapps.io/tardiness/

- **BestyCoupons**:

  This is a WordPress theme developed for people who want to start their coupons and deals website. With this purpose, the theme has features like add and manage stores, add coupons and deals, redeem coupon, and rating system.
  Role: WordPress Theme Developer
  Period: 1month
  URL: https://bestycoupons.com

- **EMSSG**:

  This is a 3D, first person, Sci-fi, survival mummy shooter game for windows. The game has 4 different enemies with different color and sizes variations. It has endless waves of mummies and each iteration the number of enemy spawn would increase. It has HP rune and power up rune that you can pick up to help you survive the game. This game is for people who just want to pass time and shoot some mummies.
  Role: Game Developer
  Period: 1month
